Research Interests

My research focuses on cosmic inflation through the Cosmic Microwave Background (CMB) and Gravitational Waves (GWs), with a methodological emphasis on likelihood analysis. I lead the power-spectrum estimation and likelihood effort within the LiteBIRD collaboration and the LT1 subgroup of the Likelihood & Theory group of the Simons Observatory (SO), where I develop end-to-end pipelines that combine harmonic and pixel-based estimators with realistic component separation. In parallel, I develop CosmoForge, a unified likelihood framework for current and future CMB experiments, which I keep improving and extending with new features. On the science side, I have produced Bayesian and frequentist constraints on the amplitude and tilt of the primordial tensor spectrum, and I work on stochastic GW backgrounds and their cross-correlation with the CMB, including recent data-driven bounds on the quantum decoherence of inflationary GWs.

Positions & Education

Feb 2024 — present **Postdoctoral Researcher**, University of Ferrara.

Nov 2020 — Apr 2024 **Ph.D. with honors in Astronomy, Astrophysics and Space Science**, Sapienza University of Rome; research carried out at the University of Rome Tor Vergata. Supervisors: Prof. Nicola Vittorio, Prof. Sabino Matarrese.

Oct 2018 — Oct 2020 **M.Sc. with honors, Physics of the Universe**, University of Padova. Thesis: Prof. Nicola Bartolo, Dr. Angelo Ricciardone.

Oct 2014 — Oct 2018 **B.Sc. in Physics**, University of Padova. Thesis: Prof. Giacomo Ciani.

Fellowships, Grants & Visitings

2025 Departmental grant as sole PI, University of Ferrara: BICEP/Keck analysis with the mHL likelihood.

2023 — 2026 Six funded secondments to Japan (Kavli IPMU and KEK, about 16 weeks in total) via MSCA CMB-INFLATE.

Sep — Dec 2023 Funded visiting at IJCLab, Orsay (France).

Nov 2020 — Apr 2024 Full Ph.D. fellowship, Sapienza University of Rome.

Jun — Sep 2017 Funded internship at the University of Florida (bachelor thesis).

Independent Projects

Ongoing **CosmoForge — Power Spectrum and Likelihood Framework.** Python framework for power-spectrum estimation and likelihood analysis on large-scale CMB data, designed as a unified tool for LiteBIRD, SO, and future experiments.

In prep. **BICEP Diagnosis with the marginalized HL Likelihood.** Re-analysis of BICEP data exploiting new capabilities of the marginalized Hamimeche & Lewis (mHL) likelihood, stress-testing existing constraints on tensor modes.

Collaboration Projects

Jun 2024 — **LiteBIRD — Foreground and Sensitivity Studies.** Interfacing my Python package with foreground separation and sensitivity analyses.

May 2024 — **SO — Likelihood & Theory.** Lead of the LT1 subgroup; maintenance and development of SOLikeT. Contributed single-mode likelihoods and led the restructuring of LAT MFLike.

Sep 2024 — **SO — Power Spectrum.** Contributing to the Power Spectrum group, with planned developments on QML-based estimators for large-scale modes.

Jan 2026 — **LiteBIRD — Moment-Expansion Component Separation.** Improving and characterizing the moment-expansion approach in the LiteBIRD context.

Jun 2023 — **LiteBIRD — MaPLEs team.** Leading efforts to study and characterize the likelihood of LiteBIRD; released within the collaboration a Python package to perform this analysis.

Apr 2023 — **LiteBIRD — Simulation Team.** Validation tests, cosmological analysis of CMB temperature with LiteBIRD, and development of parts of `litebird_sim`.

May 2022 — **LiteBIRD — Tests on Cosmic Inflation.** Monte-Carlo study of which inflationary models can be detected by LiteBIRD.

Service & Leadership

2023 — Lead, power-spectrum estimation and likelihood effort, LiteBIRD.

Sep 2024 — Lead, LT1 subgroup of the Likelihood & Theory group, Simons Observatory.

Dec 2025 — Early Career Coordination (ECC) representative, LiteBIRD.

Feb 2026 — Member, Interim Governance Board, LiteBIRD.

2026 Invited chair, discussion on Early Universe and GWs, CosmoCLASSIC 2026 (Asiago).

Jan 2026 SOC member, LiteBIRD Face-to-Face Meeting.

Jul 2024 Session organizer & chair on the present/future of CMB, Marcel Grossman XVII (Pescara).

Ongoing Referee for MNRAS, JCAP and Astronomy and Computing.

Selected Talks

Jul 2026 Highlight Talk and two topical talks, Simons Observatory Collaboration Meeting, Toronto (Canada).

Jul 2026 Invited Review Talk, CMB Challenges, Chino (Japan).

May 2026 Invited Seminar at SISSA (Italy).

Apr 2026 Invited Speaker, GRaviCon 2026, Pisa (Italy).

Nov 2025 Invited Speaker, GW-CMB 2025, National Central University (Taiwan).

Sep 2025 Invited Speaker, Tensions in Cosmology, Corfu (Greece).

May 2025 Invited Outreach Talk, Pint of Science, Ferrara (Italy).

Dec 2024 Invited Seminar, University of Rome Tor Vergata (Italy).

Dec 2024 Invited Seminar, University of Padova (Italy).

Jul 2024 Invited Speaker, Marcel Grossman XVII, Pescara (Italy) — ICRANet.

Jul 2024 Invited Speaker, KEK CMB Group Meeting, Tsukuba (Japan).

Feb 2024 Invited Speaker, ASI-LiteBIRD, Frascati (Italy).

Teaching & Mentorship

a.y. 2026/27 **Bayesian Statistics**, M.Sc. in Physics, University of Ferrara. Co-taught with M. Lattanzi.

Feb 2026 — External mentor of a Ph.D. student at National Central University (Taiwan), working on r–n_t constraints from a joint analysis of LIGO-Virgo-KAGRA likelihoods and Simons Observatory forecasts.

Nov 2025 — Jul 2026 Co-supervisor of a Master student at the University of Padova, on the recovery of r and n_t from SO forecasts.

2024 Mentor of a Ph.D. student at the University of Padova, on the first data-driven bounds on the quantum decoherence of inflationary GWs.

Feb 2024 — Supervisor, then co-supervisor with L. Pagano, at the University of Ferrara: Master thesis on τ from Planck and WMAP, then a Ph.D. on a cross-spectra likelihood for τ (Genesini et al. 2026), moment-expansion component separation and reionization history.

Software Skills

Statistics. Expert in Bayesian and frequentist methods. Author of CosmoForge, a unified Python framework for QML and pixel-based CMB likelihood analyses; contributed to Cobaya; developed a profile-likelihood sampler.

Programming. Highly proficient in Python and C, with strong experience in package design, maintenance, and CI workflows. Author of CosmoForge, maintainer of SOLikeT and `litebird_sim`, contributor to several open-source cosmology repositories.

Boltzmann codes. Proficient user of CAMB and CLASS.
